Yes, you can set up automatic syncing between your Mac and your Apple devices (such as iPhones, iPads, or iPod touches) using Wi-Fi or a USB/USB-C connection. Here's how you can do it:

Initial Setup

1. **Connect Your Device**: First, connect your Apple device to your Mac using a USB or USB-C cable. This initial connection is necessary to set up Wi-Fi syncing.
2. **Select the Device in Finder**: Once connected, select your device in the Finder sidebar on your Mac. If you don't see the device, ensure that the "CDs, DVDs, and iOS Devices" checkbox is selected in Finder settings.

Enabling Wi-Fi Syncing

1. **Turn On Wi-Fi Syncing**: In the Finder window, click on the "General" tab in the button bar. Check the box labeled "Show this [device] when on Wi-Fi" and select any other sync settings you desire. Click "Apply".

Automatic Syncing

1. **Automatic Sync Option**: To enable automatic syncing, select the "Automatically sync when this [device] is connected" checkbox in the General pane. This will ensure that your device syncs automatically whenever it is connected to the same Wi-Fi network as your Mac.
2. **Select Content to Sync**: Choose the types of content you want to sync, such as music, movies, TV shows, books, or photos. You can sync all items of a specific type or select specific items to sync.

Wireless Syncing

1. **Wi-Fi Connection**: After the initial setup, you can disconnect the USB/USB-C cable. Your device will appear in the Finder sidebar whenever it is connected to the same Wi-Fi network as your Mac. You can then select the device and manage or initiate syncing.
